▶ Product Introduction

Token makes Flip Chip, Resistor Networks, and Chip Array a green old age.

Features :

- Tight Tolerance down to $\pm 0.1\%$
- Wide R-Value Range $10\ \Omega \sim 1\text{Meg}\ \Omega$
- Extremely Low TCR down to $\pm 25\ \text{PPM}/^\circ\text{C}$
- Special Passivated NiCr Film for Anti-Acid and Anti-Damp
- Long Term Life Stability with Advance Thin Film Technology
- Demonstrated the Anti-Corrosion Claims Characterized by Ta_2N

Applications :

- Telecommunication Device
- Automotive, Medical Equipment
- Outdoor Electronic Applications
- High-end Multimedia Electronics
- Automatic Equipment Controller
- High-end Computer, Industrial Equipment

Token has introduced precision surface-mount resistor networks, chip array, and flip-chips. Those no-lead packages are optimized to meet new automotive industry requirements for temperature and humidity, while offering high repeatability and stable performance for industrial, telecommunication, and consumer electronics.

Suitable for processing on automatic SMD assembly systems, those new devices are RoHS-compliant and compatible with lead (Pb)-free and tin/lead (Sn/Pb) reflow and vapor-phase soldering processes.

Flip Chip Resistor FCR Series:

- The resistor flip chip configurations (FCR Series) are available in industry standard EIA0603, EIA0805, and EIA1206.
- Power Rating 1/10W, 1/8W, and 1/4W are available in max. voltage 100V, 300V, and 300V respectively.
- Resistance tolerance is tight to F($\pm 1\%$), J($\pm 5\%$) with resistance range $1\ \Omega$ to $10\text{M}\ \Omega$.

Resistor Chip Array RCA Series:

- Its small 1.6mm by 3.2mm package enables the design of high-density circuits.
- The resistor chip array (RCA Series) offers a low cost when compared to using four high-precision resistors.
- The devices feature precision ratio tolerances to F($\pm 1\%$), G($\pm 2\%$), and J($\pm 5\%$) are available with resistance range $10\ \Omega$ to $1\text{M}\ \Omega$.

Resistor Networks RCN Series:

- The (RCN) resistor networks offer a resistance range from $10\ \Omega$ to $1\text{M}\ \Omega$ at operating temperature range $-55\ ^\circ\text{C} \sim +125\ ^\circ\text{C}$.
- All devices offer power ratings of 1/16W at $+70\ ^\circ\text{C}$ per resistor, custom configurations of the devices are available.

Full line products meet RoHS compliant. Detailed specifications, both mechanical and electrical, please contact our sales representative or link to Token official website "[Chip Resistors](http://www.token.com.tw)" for more information.

► General Information

Token Thin Film Chips Add Powerful New Options

Token electronics provides the industry's most comprehensive range of precision thin film technologies for discrete, network, and integrated passive components used in instrumentation; automotive electronics; communications systems; and portable electronics applications. Ultra-reliable precision Nichrome resistive elements are available on ceramic or silicon substrates in a wide variety of surface mount resistors.

In response to market demands for increased precision and stability, Token has expanded range of nichrome thin-film chip resistors. Offering solutions to precision test and measurement and voltage regulation across industrial, military and medical monitoring equipment markets designed to offer superior humidity performance.

Token Thick Film Chips Cut the Cost of Precision Resistors

Token electronics has developed an extensive range of thick film / thin film resistive technologies for electronic circuits in power supplies; test and measurement; industrial electronics; telecommunications; audio circuits; automotive control systems; lighting controls; medical electronics; industrial equipment; and control systems applications.

In addition to this, proven thick film technologies from Token electronics provide a large range of standard resistive low Ohmic current sense products for critical battery management, and line termination. The enhanced performance of the chips is made possible by the precise use of the best resistance inks and a closely controlled production process.

Token Chip Low Ohmic Resistors come in Smaller Sizes and Minimized Power Consumption

Today's electronic devices are becoming smaller and smaller. As a result, designers are moving more towards surface mount components not only for new designs but also to design out large axial and other through-hole resistors.

In most cases this is a straight forward task as several resistor manufacturers offer chip resistors with performances to match axial parts. However in some cases, due to power rating or pulse withstanding requirements, this has been impossible. The requirement, in particular, for pulse withstand capability is growing due to the need to protect sensitive modern electronic systems. To meet this demand Token electronics have designed a Pulse Withstanding Chip Resistor (PWR Series).
