Product Introduction

Token advanced power metal film sputtering technology meets stability and high-precision requirements.

**Features:**
- Automatic surface mount special design. Lower assembly costs.
- Excellent electrical stability and mechanical strength.
- Flameproof UL94V0 Resin molded package.
- Heat resistant, moisture resistant, insulated.

**Applications:**
- Consumer electronics, computers.
- Telecommunications, control equipment and so on.

In the metal layer to achieve a homogenous crystalline structure, Token Electronics' surface mount power type metal film package resistor (SMF) benefits from the key advantages of today's sputtering technology for the tight control of metal film thickness.

By photolithography, the same length and width of the resistive element can be controlled by the same precision and accuracy as the thickness of the sputtered metal film layer.

Surface Mounted Power Metal Film Resistors (SMF) have good accuracy tolerances, good stability and low TCR characteristics. In addition, due to the low voltage coefficient, the resistor has low noise characteristics and high linearity. Thus, in important circuits, (SMF) power chip resistors are commonly used in active filters or bridge circuits.

Token (SMF) power-type metal film molded resistors provide three power, 2W, 3W, and 5W. Resistance range of 10Ω ~ 2MΩ, and the maximum working voltage up to 500V. The tolerance accuracy has two options ±1% (F), and ±5% (J) with temperature coefficient of ±100ppm/°C.

(SMF) series are available in tapes, RoHS compliant and 100% lead free. For conventional parameters, specifications outside the parameters, or technical requirements, please contact Token. Detailed specifications, both mechanical and electrical, please contact us with your specific needs, or link to Token official website “Chip Resistors” to get more information.
