▶ Product Introduction

Token (PWR) pulse withstanding chip resistors provide 50 percent increase in power dissipation.

Features :

- High Power Rating
- Tolerance from $\pm 0.5\%$ ~ $\pm 5\%$
- Improved Working Voltage Ratings
- Standard Package sizes 0603 ~ 2512
- Excellent Pulse Withstanding Performance

Applications :

- Power Supplies, Diagnostic Equipment
- Industrial Controls, LCD Video Monitors
- Portable Battery Chargers, Medical Devices
- Motor Controls and Line-Powered Equipment
- Metering (Testing/Measurement), Circuit Protection Devices

As electronic design engineers have increased the power density of their equipment, the demand for smaller surface mount single-chip circuit protection resistors has also increased. Token developed the PWR Series resistors to provide an economical alternative to bulky molded wire-wound components or multi-chip solutions while saving both PC board space and manufacturing costs.

To meet the increased demand for the PWR Series resistors, Token has developed a series of pulse withstanding chip resistors with improved power ratings in reduced surface mounted sizes. Designated the PWR Series, the SMD resistors deliver up to 50 percent higher power ratings than conventional surface mount resistors - up to 1.5W in a standard 2512 size chip.

Token is able to boost this power rating up to 50 percent through a combination of proprietary power film materials and advanced manufacturing processes. The PWR Series Resistors are available in four standard sizes (0603, 0805, 1206, 1210, 2010 and 2512) with power ratings from 0.125W to 1.5W, and maximum operating voltage ratings for 100V to 500V. Resistance range is from 10 Ω to 20 M Ω , with tolerance tight to 0.5 percent. The PWR meets restriction of hazardous substances RoHS directive and RoHS compliance.

Along with the increased power ratings, the PWR Series resistors also feature high surge and high voltage ratings, making them extremely stable in demanding surge and pulse environments. The PWR Series chip resistors are specified for use in power supplies, circuit protection devices, portable battery chargers, motor controls and line-powered equipment.

Token will also produce devices outside these specifications to meet specific customer requirements, please contact our sales or link to Token official website " [Chip Resistors](http://www.token.com.tw) "for more information.

► Dimensions

Dimensions (Unit: mm) (PWR)

Codes	L (Unit: mm)	W (Unit: mm)	T (Unit: mm)	D1 (Unit: mm)	D2 (Unit: mm)	Weight (g)/1000pcs
PWR03 (0603)	1.60±0.10	0.80±0.10	0.45±0.10	0.30±0.20	0.30±0.20	2,042

► Electrical Spec.

Standard Electrical Specifications (PWR)

Type	Power Rating at 70°C	Operating Temp. Range	Max Operating Voltage	Max Overloading Voltage	Resistance Tolerance (%)	Resistance Range (Ω)	TCR PPM/°C
PWR03 (0603)	1/10W	-55 ~ +155°C	50V	100V	±0.5%	10~294	±200
					±1%, ±5%	1~294	±200
					±0.5%, ±1%, ±5%	300~1M	±100
PWR05 (0805)	1/8W	-55 ~ +155°C	150V	300V	±0.5%	10~294	±200
					±1%, ±5%	1~294	±200
					±0.5%, ±1%, ±5%	300~20M	±100
PWR06 (1206)	1/3W	-55 ~ +155°C	200V	400V	±0.5%	10~20	±200
					±1%, ±5%	1~20	±200
					±0.5%, ±1%, ±5%	20.5~20M	±100
PWR13 (1210)	1/2W	-55 ~ +155°C	200V	400V	±0.5%	10~20	±200
					±1%, ±5%	1~20	±200
					±0.5%, ±1%, ±5%	20.5~20M	±100
PWR10 (2010)	3/4W	-55 ~ +155°C	400V	800V	±0.5%	10~20	±200
					±1%, ±5%	1~20	±200
					±0.5%, ±1%, ±5%	20.5~20M	±100
PWR12 (2512)	1.5W	-55 ~ +155°C	500V	1000V	±0.5%	10~20	±200
					±1%, ±5%	1~20	±200
					±0.5%, ±1%, ±5%	20.5~20M	±100

- Lower Resistance :(1~10)Ω.
- Operating Voltage = $\sqrt{P * R}$, or Max. Operating Voltage listed in above table whichever is lower.
- Overloading Voltage = $2.5 * \sqrt{P * R}$, or Max. Overloading Voltage listed in above table whichever is lower.
- Optional specifications can be required.

High Power Rating Electrical Specifications (PWR)

Type	Power Rating at 70°C	Operating Temp. Range	Max Operating Voltage	Max Overloading Voltage	Resistance Tolerance (%)	Resistance Range (Ω)	TCR PPM/°C
PWR03 (0603)	1/8W, 1/5W	-55 ~ +155°C	50V	100V	±0.5%	10~294	±200
					±1%, ±5%	1~294	±200
					±0.5%, ±1%, ±5%	300~1M	±100
PWR05 (0805)	1/4W	-55 ~ +155°C	150V	300V	±0.5%	10~294	±200
					±1%, ±5%	1~294	±200
					±0.5%, ±1%, ±5%	300~20M	±100
PWR06 (1206)	1/2W	-55 ~ +155°C	200V	400V	±0.5%	10~20	±200
					±1%, ±5%	1~20	±200
					±0.5%, ±1%, ±5%	20.5~20M	±100
PWR10 (2010)	1W	-55 ~ +155°C	400V	800V	±0.5%	10~20	±200
					±1%, ±5%	1~20	±200
					±0.5%, ±1%, ±5%	20.5~20M	±100

- Lower Resistance :(1~10)Ω.
- Operating Voltage = $\sqrt{P * R}$, or Max. Operating Voltage listed in above table whichever is lower.
- Overloading Voltage = $2.5 * \sqrt{P * R}$, or Max. Overloading Voltage listed in above table whichever is lower.
- Optional specifications can be required.

Environmental Characteristics

Environmental Characteristics (PWR)

Test Item	Specification	Test Method
Short Time Overload	±0.5%	JIS-C-5201-1 4.13 IEC-60115-1 4.13 RCWV*2.5 or Max Overloading Voltage whichever is lower for 5 seconds
Leaching	Individual leaching area ≥5% Total leaching area ≥10%	JIS-C-5201-1 4.18 IEC-60068-2-58 8.2.1 -55°C~155°C, 5 cycles
Temperature Coefficient of Resistance	As Spec.	JIS-C-5201-1 4.8 IEC-60115-1 4.8 +25/-55/+25/+125/+25°C
Load Life (Endurance)	±(1%+0.05Ω)	JIS-C-5201-1 4.25 IEC-60115-1 4.25.1 RCWV, 70°C, 1.5 hours ON, 0.5 hours OFF, total 1000 hours
Humidity (Steady State) (Damp Heat with Load)	±(0.5%+0.05Ω)	JIS-C-5201-1 4.24 IEC-60115-1 4.24 40±2°C, 90~95%RH, RCWV 1.5 hours ON, 0.5 hours OFF, total 1000 hours
Resistance to Dry Heat	±0.5%	JIS-C-5202-7.2 96 hours @ +155°C without load
Low Temperature Operation	±0.5%	JIS-C-5202-7.1 1hour, -65°C followed by 45 minutes of RCWV
Dry Heat	±(0.5%+0.05Ω)	JIS-C-5201-1 4.23 IEC-60115-1 4.23.2 at +155°C for 1000 hrs. 2010, 2512 sizes: 2mm; Other sizes: 3mm
Bending Strength	±(1%+0.05Ω)	JIS-C-5201-1 4.33 IEC-60115-1 4.33 Bending once for 5 seconds. 2010, 2512 sizes: 2mm; Other sizes: 3mm
Resistance to Soldering Heat	±(0.5%+0.05Ω)	JIS-C-5201-1 4.18 IEC-60115-1 4.18 260±5°C, 10±1seconds
Solderability	95% min coverage	JIS-C-5201-1 4.17 IEC-60115-1 4.17 245°C±5°C for 3 seconds
Dielectric Withstand Voltage (Voltage Proof)	No breakdown or flashover	JIS-C-5201-1 4.7 IEC-60115-1 4.7 1.42 times Max. Operating Voltage for 1 minute
Insulation Resistance	>10GΩ	JIS-C-5201-1 4.6 IEC-60115-1 4.6 Max. Overload Voltage for 1 minute

Power Derating Curve (PWR)

- Note: Storage Temperature: 25±3°C; Humidity: <80%RH
- Rated continuous Working Voltage (RCWV) = $\sqrt{\text{Power Rating} \times \text{Resistance Value} (\Omega)}$ or Max. Operating voltage whichever is lower.
- Storage Temperature: 15°C~28°C; Humidity < 80%RH;

Lightning Surge

Lightning Surge of Pulse Withstanding Chip Resistor (PWR)

- Note: Lightning Surge of Pulse Withstanding Chip Resistors are tested in accordance with IEC 60 115-1 using both 10/700μs and 1.2/50μs pulse shapes.
- The limit of acceptance is a shift in resistance of less than 1% from the initial value.

Pulse withstanding capacity of Pulse Withstanding Chip Resistor (PWR)

- Note: The single impulse graph is the result of 50 impulses of rectangular shape applied at one-minute intervals. The power applied was subject to the restrictions of the maximum permissible impulse voltage graph shown. The limit of acceptance was a shift in resistance of less than 1% from the initial value.

Continuous Pulse of Pulse Withstanding Chip Resistor (PWR)

Continuous Pulse of Pulse Withstanding Chip Resistor (PWR)

PWR Series Pulse Voltage(100 Ohm)

Pulse Voltage of Chip Resistor (PWR)

- Note: The continuous load graph was obtained by applying repetitive rectangular pulses where the pulse period was adjusted so that the average power dissipated in the resistor was equal to its rated power at 70°C. Again the limit of acceptance was a shift in resistance of less than 1% from the initial value.

► Packaging & Reel Tape

Packaging Quantity & Reel Specifications (Unit: mm) (PWR)

▶ Application Notes

Pulse Withstanding Chip Resistors (PWR) Application & Soldering Notes

Today's electronic devices are becoming smaller and smaller. The requirement, in particular, for pulse withstand capability is growing due to the need to protect sensitive modern electronic systems. To meet this demand Token Electronics have designed a Pulse Withstanding Chip Resistor (PWR Series). The enhanced performance of the chips is made possible by the precise use of the best resistance inks and a closely controlled production process.

Application Notes:

- Applications vary from line protection for telecommunications to surge withstanding resistors for use in circuit breakers. Details of a typical telecomm and power supply application are given below.
- Telephone lines can be subjected to a large range of voltage disturbances, many of which can damage switching equipment. This has led to the need for circuit protection against both high voltage transients, usually of short duration caused by lightning strikes and overloads of longer duration, due to direct connection to mains power lines.
- These two faults are separated into primary and secondary protection.
 1. Primary protection handles the high voltage transients, and is usually located within the exchange.
 2. Secondary protection is usually built into the equipment to be protected, and deals with both current and voltage limiting.
- Voltage limiting prevents damage to the equipment and shock hazards, and current limiting prevents damage to wiring.
- To determine the suitability of a (PWR) series chip resistors for your application refer to the pulse withstanding data as given lighting surge performance using both 1.2/50 μ s and 10/700 μ s pulse shapes.

Soldering Notes:

- Electrical connection to a ceramic substrate or to a printed circuit board can be made by reflow or wave soldering of wrap-around terminations.
- Wrap-around terminations provide good leach properties and ensure reliable contact.
- Due to the robust construction, the (PWR) can be immersed in the solder bath for 30 seconds at 260 $^{\circ}$ C.
- This enables the resistor to be mounted on one side of a printed circuit board and wire-led components applied on the other side.
- (PWR) resistors themselves can operate at a maximum temperature of 155 $^{\circ}$ C.
- For soldered resistors, the joint temperature should not exceed 110 $^{\circ}$ C.
- This condition is met when the stated power levels at 70 $^{\circ}$ C and recommended pad and trace areas are used.
- Allowance should be made if smaller areas of copper are used.

Recommend Soldering Condition (PWR)

- Time of IR reflow soldering at maximum temperature point 260°C : 10s

► General Information

Token Thin Film Chips Add Powerful New Options

Token electronics provides the industry's most comprehensive range of precision thin film technologies for discrete, network, and integrated passive components used in instrumentation; automotive electronics; communications systems; and portable electronics applications. Ultra-reliable precision Nichrome resistive elements are available on ceramic or silicon substrates in a wide variety of surface mount resistors.

In response to market demands for increased precision and stability, Token has expanded range of nichrome thin-film chip resistors. Offering solutions to precision test and measurement and voltage regulation across industrial, military and medical monitoring equipment markets designed to offer superior humidity performance.

Token Thick Film Chips Cut the Cost of Precision Resistors

Token electronics has developed an extensive range of thick film / thin film resistive technologies for electronic circuits in power supplies; test and measurement; industrial electronics; telecommunications; audio circuits; automotive control systems; lighting controls; medical electronics; industrial equipment; and control systems applications.

In addition to this, proven thick film technologies from Token electronics provide a large range of standard resistive low Ohmic current sense products for critical battery management, and line termination. The enhanced performance of the chips is made possible by the precise use of the best resistance inks and a closely controlled production process.

Token Chip Low Ohmic Resistors come in Smaller Sizes and Minimized Power Consumption

Today's electronic devices are becoming smaller and smaller. As a result, designers are moving more towards surface mount components not only for new designs but also to design out large axial and other through-hole resistors.

In most cases this is a straight forward task as several resistor manufacturers offer chip resistors with performances to match axial parts. However in some cases, due to power rating or pulse withstanding requirements, this has been impossible. The requirement, in particular, for pulse withstand capability is growing due to the need to protect sensitive modern electronic systems. To meet this demand Token electronics have designed a Pulse Withstanding Chip Resistor (PWR Series).
